YouTube Trend Radar · Components Map

Live YouTube data is collected every Sunday at 5 AM, ranked in plain code and delivered by 11 AM as a swipeable brief, so Ishaan picks what to film in minutes. Gemini Flash writes the words; it never decides.

The Cut

The AI never decides what's trending. Gemini only labels titles and writes the words; plain code finds the trends, ranks them and fact-checks every sentence. Every number comes straight from YouTube, and the AI isn't allowed to write any.

Humans stay here

- Ishaan decides what to film; the brief only recommends
- He picks the topics and peer channels to track
- Every "film / maybe / skip" call is his, saved to his plan
- He bounces ideas in the Idea Studio; the AI only suggests

Never miss a Sunday

- A step that fails 3× still publishes a partial brief
- Run stalls? GitHub Actions and open tabs resume it
- No brief by 9:30 AM → backup brief + Telegram alert
- 112 automated tests cover scoring, trends, fact-checks and chat
